

Busstid<sub>Niss</sub>= 0.25+0.125+0.5= 0.875 => Bussen ar uppregen med missar 87.5% av tiden. 12,5% g&r alltså att avanda til 10-operationer.

- 3) Max bandbredd Per dish R/W-head: 600 500:200=10 MB/s. Syter=> 80 MB/s
- 4) Bandbredd for bussen: 4 ord = 16B = 320 MB/S
- 5) Anvora bandbredd Per 1/0-buss?

  DMA (128 KiB) = 2ms + 7ms + 10 MB/s : 1000 = 22.1 ms

  PHA sedup sedup transfertid

2 DMA overforming or kan she samutidiget  $\Rightarrow$   $\frac{2.128\,\mathrm{K.B}}{2.21\,\mathrm{ms}}$  = 11.86 MB/s (effective databandoreda per 1/0-buss)

Bandbredd for dish > Bandbredd for 1/0-Buss, alltså ar det 1/0-bussen som flaslar.

6) 0.125:320-40 MB/s ledigt for 1/0 => 3:11.86 < 40 => Vi kan ha 3 1/0-kentroller.

## Q2a. 2011-01-12

add Ry=R1+R0 Lila loses med ALV FWD	
Sub R9=R3-R4 Red geringen hazara.	
add Ry= R5+R6 Gv8n måste stallas en cyllel och sedan använda	MF >> EX FWD.
lω Rl= M[R3+100]	
lw Re=M[Re+0]	
Sw MCR4+10e]=R9 Uppgiften ar dod, att gora ett diagram som beskrive	ler dettsa.
and R3=R3 LR1	
beq R9==R1, Target	
and R9= R9 CR1
